

Amazon Herbs' Healthy Horse Formula "Equinezon"

The Amazon Herbs Horse Health Formula addresses Equine Health from the perspective that true health and disease begin and end with Digestion. It is designed to support and restore proper equine digestive function, lower pain and inflammation, and promote increased cardiovascular and immune system strength. What's in our Horse Health Formula?

Una de Gato (Cat's Claw) helps stimulate and support the immune system, reduce pain and promote cellular detoxification.

Quebra Pedra - (chanca piedra) Assists the body in dissolving kidney stones and enteroliths. Anti-viral and anti-bacterial, it also aids digestion and helps cleanse the liver and kidneys.

Jatoba is added to this formula to assist the horse in lowering fungal, viral and bacterial levels in the body. It helps with bronchial congestion and assists the body to expel parasites.

Sangre de Drago is our potent anti-oxidant sap that promotes circulatory and digestive track health and helps to break down scar tissue in the body. It also offers the added benefits of lowering pain and inflammation.

Boldo is extremely important for digestive health. It stimulates digestion, protects and detoxifies the liver and reduces dietary gas.

Chuchuhuasi has been important for centuries for relaxing the long muscles of the body. It supports adrenal gland function, relieves pain and enhances the immune system.

Camu-Camu - This powerful source of Vitamin C is included in our formula to fight the effects of free radicals, promote cardiovascular health and as a natural antihistamine.

Stevia has long been used to balance blood sugar levels. Stevia also dilates blood vessels and supports the immune system by fighting bacteria, yeast and viral levels in the body.

Licorice has soothing, anti-inflammatory, and antiviral properties. Licorice is also used for ulcers, irritable bowel and bowel inflammation, bronchitis, coughs, and adrenal weakness caused by stress or overwork.

Now available in 500 gram containers. Preferred Price \$89.00

Suggested dosages: Therapeutic 1 to 3 tbsp per day, Maintenance ½ to 1 tbsp per day.

Your Amazon Herb Representative:

Equinezon was originally designed to address ulcers, colic and the scar tissue that develops in the horse's digestive tract from colic. As we have used it on the horses at our Equine Wellness Center we have discovered many other benefits. Horses afflicted with laminitis and founder have rapidly improved with reduced inflammation, rapid hoof growth and improved mobility. One older foundered Andalusian gelding was able to come off 4 bute a day within 5 days of using the Equinezon. A foundered race horse which had not grown any hoof for 6 months added at least one third of an inch within a month of going on Equinezon. Our mare, Peanut, is recovering from a life-threatening leg wound. She has begun to put back on weight and move with less pain. She has healed without infection because of the Amazon Herbs. Our barn will keep this formula on hand!

Grand Adventures Ranch, Sonoita, AZ

We first tested your new horse formula at a ranch in Carefree, AZ where they have lost multiple horses in recent years to an undiagnosed wasting disease. Affected horses develop diarrhea, rapidly lose weight and often die within weeks. Repeated autopsies have failed to identify a cause. When you contacted me about Equinezon they had more horses beginning to get sick. We started them on the Equinezon and within days they had turned around. They are eating well, putting on weight and have become social with the other horses again. Please let me know as soon as this formula is available commercially!

The Rite Bite

Hi Kay,

I contacted you through Judi Heimpel about a test candidate for your new Equine formula about a horse we have at Field of Dreams Horse Rescue and Adoption.

Dell is a 24-year-old 15.1 hand thoroughbred type mare that came to us in Nov. 2005. ... She had a very unhealthy long dull coat and very apparent digestion problems and a constant cough. We had blood work done but didn't really show anything. We put her on Fiberzon for the first few days after she arrived and then put her on Digestazon Plus for about a month. It definitely helped with her loose poops and she gained some weight but didn't do anything for her constant gas and cough. The vet put her on a round of antibiotics but that didn't change anything. We tried several different herbs, which definitely helped with her coat and overall health, but again nothing helped with her gas and cough. We started using your Equine formula on Oct 19th at one scoop two times a day until we finished it on Dec. 11th. There was no change and we thought it wouldn't help at all until around the last week in November when the cough and gas reduced by 90%. She had now been off the formula for nine days now and we have started to see the cough and gas returning. Is there a possibility we could get another container for her? Or when will it be available to purchase?

Thank you so much for letting us be a test case for Dell as we finally found something that helped!!!

Field of Dreams Horse Rescue and Adoption

Kay,

Wanted to let you know the results of using the formula. Last Sat. I took a sample of fecal to the Vet here in town. They are not familiar with Alpacas but she came out and asked us what we were looking for. We said, well parasites or anything that would concern the health of the Alpacas. She went back and did more testing and came out and said she had never seen such clean poop. She did find what she thought was 2 eggs but they were fully capsulated in fluid. One of the samples was from our girl that has been on the farm since we started. The other was one that arrived from Oregon.

So we decided to take another sample to a Vet that was familiar with Alpacas. This was random samples from the two poop piles in the girls pasture. We have 7 girls in there. It was amazing. He came out and asked me what I was doing. I told him they were not getting any more medicine for the last 3 months and that we are just giving them these herbs. He said well they must have been clean before we started. But he didn't even see any nematodes and that is highly unusual. He never saw such clean poop. Then I told him we had 2 alpacas come from Oregon with parasites and they both had been treated for parasites before they left and they have been in with the other girls for the last 3 months. I was to treat them right away and quarantined them. I told him I did not do this. He said O.K. continue your herbs bring me back samples in 3 months and if it is just as clean as this we are going to talk.

I have contacted Amazon about the formula and they finally have it ready. I will order today.

Thanks so much, Alicia Rocco, Business Manager, Alpaca Spring Valley Farm

Hi Kay,

Just a note to say Thank You for thinking of Dakota for your Equinezon trial. Dakota is a 25 year old ½ Appy ½ Draft horse with many body aches and Cushings Disease. Since putting him on the Equinezon and Recovazon he has been acting like a younger horse. During last week's ground work exercises he insisted on trotting and dragging mom around! This has been a great improvement over the Chinese herbs he was on. I am looking forward to seeing how he looks this summer.

Cathy, Sonoita, Arizona
